PROFESSIONAL SUMMARY

I'm a data analyst who came up through a Computer Applications degree and a lot of self-driven project work in SQL, Python, Power BI, and Tableau. I like taking a messy spreadsheet nobody wants to touch and turning it into something a manager can actually use. Right now I'm working as a store manager, dealing with real sales and inventory numbers daily, while finishing an IBM Data Science certificate on the side — and looking to move into analytics full-time.

TECHNICAL SKILLS

Python (pandas, NumPy, Matplotlib, Seaborn), SQL, Power BI, Tableau, Excel (Pivot Tables, Advanced Formulas), Exploratory Data Analysis, KPI Reporting, Google Analytics (GA4)

WORK EXPERIENCE

- Store Manager** · *Costa, Clothing Retail* Sep 2026 – Present
- Keep an eye on daily and weekly sales against targets, and flag what's underperforming so we know what to restock or push.
 - Run billing and inventory through the store's ERP system — it auto-exports to Excel at close, which I check for accuracy.
 - Go through closing reports each day to catch mismatches between what sold and what's actually in stock.

PROJECTS

- Employee Attrition Analysis** · *SQL, Python, Power BI* Jan 2026
- Dug into employee data to explain a 16.12% attrition rate (237 of 1,470 employees).
 - Traced it back to overtime, job role, and pay — found a \$2,046 average income gap between people who stayed and people who left.
 - Built a Power BI dashboard with KPI cards and department breakdowns for HR to actually use.
- Walmart Sales Analysis** · *SQL, Python, Tableau · dataset: 2010–2012* Mar 2026
- Worked through 6,435 weekly sales records across 45 Walmart stores using SQL and Python.
 - Found holiday weeks bring in about 7.8% more sales on average than regular weeks.
 - Published an interactive Tableau Public dashboard covering seasonal trends and how sales track against fuel price, CPI, and unemployment.
- Customer Behavior Analysis** · *Python, EDA, Power BI* May 2026
- Cleaned a customer shopping dataset — fixed missing values, standardized types and column names.
 - Identified purchasing segments and trends to support business decisions.
 - Built visualizations and a Power BI report to walk through the findings.

EDUCATION

- IBM Data Science Professional Certificate** · *Coursera* Jul 2026 – Present
- Data Analytics** · *SLA Institute* Jan 2025 – Jun 2026
- Bachelor of Computer Application (BCA)** · *Hindustan Institute of Technology and Science* Jun 2022 – Jun 2025
- Higher Secondary** · *Computer Science & Biology · Kariyad Nambiar Higher Secondary School* Jun 2018 – Mar 2019

CERTIFICATIONS

- Google Analytics Certification — Google Skillshop (Jun 2026)
- Data Visualization with Power BI — Microsoft & Great Learning (Jun 2026)
- SQL (Basic) — HackerRank (Jun 2026)
- Data Analytics — SLA Institute (Jun 2026)
- Quantitative Research Job Simulation — JPMorgan Chase & Co., via Forage (Jul 2026)
- Data Analytics Job Simulation — Deloitte, via Forage (Jul 2026)
